

*LOOK UP "PICS OF RULE OF THIRDS"

- RULE OF THIRDS: is a composition guideline that suggests dividing an image into 9 equal parts with 2 horizontal and 2 vertical lines, and then placing key elements along these lines or at their intersection points to create a more balanced, interesting, and dynamic composition than a centered subject

This technique encourages photographers to use negative space effectively, draw the viewers eye to a specific focal point, also helpful with landscape photos by placing the horizon on a third line instead of centre.

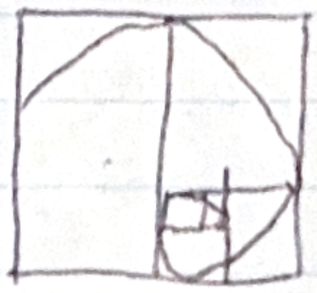

- can also be cut to 3 lines, or turned 45° degrees

- FIBONACCI SPIRAL: a graphical appoximation of the golden spiral, constructed using ~~golden~~ quarter-circle arcs within a series of squares whose side lengths are based on the Fibonacci sequence (1, 1, 2, 3, 5, 8, etc) where each # is the sum of the preceding ones.

This pattern is found in nature as a sequence that maximises space & efficiency. (SEA SHELLS, SUNFLOWER SEEDS, HURRICANES)

1-1-2-3-5-

BOTH OPTIONS CAN BE SET ON HORIZONTAL FRAMES ALSO

*LOOK UP PAINTINGS 8-13 USING FIBONACCI SPIRAL. PIC'S USING PATTERN ALSO
